

**IN THE CLAIMS:**

This Listing of Claims will replace all prior versions, and listings, of claims in the subject Patent Application:

**Listing of Claims:**

1. (Currently amended) An illuminating device comprising:

a casing having a central hole for being adapted to receive a wheel axle therethrough, a plurality of luminous elements connected to the casing;

a coil assembly engaged with the casing and wires extending from the coil assembly and electrically connected to the luminous elements, and

a collar adapted to be fixed connected to a front fork or chain stays, the collar and having a disk-shaped surface and a circular magnet coupled to protrude axially therefrom to extend concentrically into the coil assembly, the coil assembly thereby rotatably enclosing the circular magnet, the disk-shaped surface extending radially outward from the circular magnet for shielding a side periphery of the coil assembly.

2. (Currently amended) The device as claimed in claim 1, wherein the luminous elements are light emitting diodes and each light emitting diodes includes two legs connected respectively to the wires, a separation plate extending from an inside of the casing and located between the two legs of each light emitting diodes.

MR2049-353

Serial Number: 10/646,861

Reply to Office Action dated 11 January 2005

3. (Currently Amended) The device as claimed in claim 1, wherein the casing has a plurality of clamping members which are adapted to connect ~~the~~ to spokes.
